

Rook is advancing security and health worldwide and has for decades been offering intelligent and reliable systems for remote monitoring of rodents. With our system the site is being monitored 24/7 for rodent activity and not just when a pest control operator is on site.

Alerting today for a better tomorrow 🚨

Our system is monitoring and notifying about rodent activity and catch in real-time. An e-mail is sent immediately after detection of rodent activity allowing prompt action, speed up root cause analysis and reducing risks of infestations. We also offer digital reporting and analytics to improve audit readiness.

Detailed rodent tracking 📍

Most alternative systems only offer information about a rodent catch, but with our unique multi-sensor solution we are able not only to record rodent catch but also detailed movements of rodents which results in much more effective pest management. Our system is independent of traps and bait stations which gives maximum flexibility to the pest control operator. It also allows the system to work optimal in many different settings both in- and out-side.

Benefits of the GTO system:

- ✓ Avoid frequent inspections of empty bait stations
- ✓ Immediate alarm in case of rodent activity
- ✓ Permanent rodent monitoring – not only catch
- ✓ Plug and play – easy to install and operate
- ✓ Unique multi-sensor capabilities
- ✓ Speed up root cause analysis
- ✓ Less business disruption
- ✓ Improved audit readiness

GTO - Validated by industry experts 🟢

“We have used GTO as part of numerous trouble shooting investigations and have found it to be an extremely reliable indicator of rodent presence, highlighting activity that conventional bait stations and traps have missed completely.
– Dr. John Simmons (Managing Director Acheta Consulting Ltd.)

“Using GTO enable us to act much faster as oppose to wait for a pre-scheduled visit and thereby cause delays and making infestations worse.”
- Paul-Martin Bertelsen (CEO Mortalin A/S)

Big business needs big security 🟢

Our system is highly scalable and you can add as many installations and make installations as big as you want. From anywhere our online web portal allows you to control and monitor as many sites as you want. We offer a truly multi-user system with very high data security.
